

Dear future generations,

To all the people who come after me, I'm writing to you so that you are aware of these issues you may come across. Social media and technology are becoming a threat to society.

Nowadays, people develop technology to become smarter and more intelligent for instance, the "internet" is the main source of information today, almost everything can be found on the internet.

Our world has been developed mostly using technologies such as robots as an assistant or using it to complete tasks. In China, there are restaurants with robots waiters, this could be a disadvantage to some people because they are losing their jobs to robots. These days people use robotic vacuum cleaners to clean their homes. This could be convenient but on the other hand, people can become lazy and not do anything. The technology could take over the world even though we created it. You need to be careful of technology and use it safely. An example where tech is bad this, social media. There are many dangers when using social media. The main risks are cyber-bullying and invasion of privacy. You could get addicted to social media and that could affect your health by causing eye strain or lack of sleep.

I want you to be aware of social media and technology using it with limits. Don't let technology "control" you but you "control" it! Beware the dangers that come with "technologies", use technology safely, respectfully and responsibly. I'm not saying that you shouldn't be using it but I want you to use it wisely.
