Artifact One: Wood Bug Scientific Investigation

1 - **Click on Image to see the whole thing*

Social Responsibility, Solving Problems in peaceful ways.

I can identify problems and compare potential problem-solving strategies. When working on this project we ran into some problems while working on the investigation. For example, we had to change the question 2 times since it wasn't working, we had to come up with another idea to collect some data, but together we were able to communicate at school, messages, FaceTime to come up with solutions for our project. To present the whole project at the end everything had to be online, we used multiple apps and tools to help us. For the title page and habitat page we were able to use Canva which helped us organize

the pictures that we needed on there and it was fun to explore and play around with the fonts, and many backgrounds to choose from. There were some problems in the making of the pages which we had to make new strategies to fix them. For the graphs and data, we used Excel and for the rest of the writing/lists we used Word. Another core competency was (making) being able to identify and use appropriate tools, technologies, materials, and processes for production.

Artifact Two: Photography Architecture Black and White Project

Creative Thinking, Developing Ideas. I build the skills I need to make my ideas work, and usually succeed, even if it takes a few tries. For this project I had come up with many ideas to make my photos

work and fit the instructions. Making sure it was perfectly focused and centred are so important. For the third image of the school corner it took me a lot of shots to get it exactly how I wanted it to be with the sky and clouds, for it to work and turn out good I practiced taking photos in other spots to fully build the skills I needed for this picture. The tool used was Photoshop, which is how the photos are black and white along with the border around each shot. The bird image took a few tries to get it exactly how I needed it to be along with the other two. Asking questions and getting others ideas were a huge help for this project and it gave me a chance to learn new tricks on the camera.

Artifact Three: Morocco Project!

Communication, Acquire, interpret, and present information (includes inquiries). I present information clearly and in an organized way. I can present information and ideas to an audience I may not know. This project was from last year and it was near the end when we had a debate and learned about the UN, we were assigned teams and a Country we had to represent. I got Morocco and had to give an introduction of the country. My team and I chose to use PowerPoint to help us be able to present our Country in a cool and organized way. Although it I was nervous to speak in front of people I didn't know, I felt better knowing the PowerPoint was behind me in case I forgot what to say. Using a variety of sources of inspiration and information was how we got all the information, and I even sited the sources we used with the information on the slides. Another way I showed these competencies, on each slide there is a different topic that stands out than the rest of the information, by including photos the audience was able to engage more and pay attention to the presentation.
