

Lollipop straws

Save our planet with 1 straw
at a time

jinkies parties

What's wrong with our environment?

- **Plastic** pollution is a global problem.
- The majority of **plastic** winds up in landfills where it remains indefinitely.
- It is not just the accumulation of **plastics** that harms the **environment**—it is also the fragments and toxins released during photo-decomposition that pollute our soil and water.

How have people helped to eliminate this problem?

- People have used reusable cups, straws, metal, bamboo and other thing that can replace plastic.
- People go to the beach or to the ocean to pick up plastic and other trash

What's one thing you
can do?

—

One way is not
using plastic
straws

Straws are bad for our Environment

- Plastic
- 32 percent of 78 million tons of plastic are thrown into the ocean or in other words it's like throwing one whole garbage truck of plastic every minute.
- There are a lot of water animals in the ocean and lots of those animals are dying or are in pain because of these straws and other products made out of plastic.

How often do people use straws

- Many fast food restaurants, like Mcdonalds, Wendy's, Burger King, Sonic
- Other restaurants
- Corner stores and gas stations, like 7-Eleven and Chevron
- Parties, purchase from Walmart or dollar stores

What can you do?

- Ever thought about using reusable silicone straws?
- Ever thought about using paper straws?

If you don't, I know why?.....

And if you do, you might not want to because...

Some people use
REUSABLE
straws...but...what's
wrong with them?

- Not always available
- Hard to clean
- Expensive

What about paper straws?

- Taste bad
- Soggy after a while
- Has an aftertaste
- usually smells like cardboard
- Not as firm and flexible as plastic straws

Use my LOLLIPOP STRAWS instead!!!

- Good for our environment
- Comes in different flavors
- Comes in plain no flavor
- Firm like a plastic straw
- Inexpensive to make and sell
- Can be made with no sugar
- Who doesn't like lollipops

Thank You
